

## **CXi V-Twin with Oil Xtend System:**

The CXi Series V-Twin engines are engineered for high-debris applications, featuring a patented 5-Step Debris Management System and cyclonic air filter for extended engine life. With the optional Oil Xtend™ System, these engines offer enhanced durability and extended maintenance intervals, making them ideal for the toughest conditions and terrains.

- Briggs introduced the Oil Xtend System on most CXi V-twin models to elevate the hassle of oil changes
- Oil Xtend more than doubles the 100 hour oil change to 250 hours
- For some large estate owners, that might mean they never need to change the oil
- Oil Xtend aligns all maintenance intervals for oil, filters and plugs to 250 hours
- When it is time to change the oil, a top-mounted premium oil filter and an easy-drain oil hose makes it easy and clean
- Briggs Oil Xtend System demonstrate we're serious about longer oil change intervals that are easier on consumers and professionals
